

ABILITYPOST

AbilityPost PUSH™

Unlocking independence
with ease.

Accessible gate entry for wheelchair users,
mobility-aid users and inclusive communities.

ONE-WAY ACCESSIBLE GATE SYSTEM

Designed to maintain site containment and keep
people safely within the fenced area. Entry only;
exit is prevented from the hazardous side.

TRADITIONAL GATES CREATE BARRIERS

High-mounted pull-up locks can preserve containment, but many wheelchair users cannot reach them independently.

Traditional gate systems often rely on high-mounted pull-up locks that many wheelchair users cannot independently access. While these systems provide important safety and containment, they can unintentionally create barriers for people with limited mobility.

The challenge: preserve the existing safety function while making entry genuinely accessible.

INTRODUCING ABILITYPOST PUSH™

Independent access through a simple push-button activated mechanical release system.

- NO ELECTRICITY**
A fully mechanical system with no power supply.
- WHEELCHAIR FRIENDLY**
Accessible push button at approximately 750 mm.
- LOW MAINTENANCE**
Simple, robust components for everyday use.
- NO BATTERIES**
Reliable operation without battery replacement.
- RETROFIT COMPATIBLE**
Designed to work with existing gate arrangements.
- NEW ZEALAND DESIGNED**
Developed for schools, parks and community facilities.
